

# INTERCALL MOBILEMEET

A CLEVER APP FOR YOUR SMART DEVICE

Don't miss a thing when you are away from your office and stay connected with total independence from your desktop.

InterCall® MobileMeet® is the cornerstone of on-the-go InterCall Reservationless-Plus® meetings. Discover a full-circle approach to meeting from your iPhone and Android smartphone. In addition to starting and joining meetings, enjoy a richer conferencing experience by sending meetings invites, accessing your enabled features, as well as sharing and viewing meeting content. Empower your meetings with this functionality:

**Voice over IP (VoIP)** – Use VoIP to talk and control your meetings with carriers not supporting simultaneous talk and data (e.g., Sprint) or when traveling internationally to avoid high voice roaming charges. Enhance audio quality from any location with Reservationless-Plus with Dolby Voice®.

**Chat** – Add a new level of engagement between you and participants with the in-meeting chat feature that works across mobile and desktop connections.

**Share and View Content** – Collaborate more with your participants by sharing and viewing content from your iPhone and Android phones.

**Push Notifications** – Receive push notifications when someone first enters your waiting room and again after five minutes of inactivity as a reminder to start your meeting.

**Native Calendar Integration** – See when you have a free moment and the ability to schedule a meeting by using the in-app calendar to view appointments scheduled on your device's native calendar.

**Favorite Meeting Profiles** – Store an unlimited number of unique meeting profiles for quick access—retrieve global dial-in numbers and connect with one tap.

**Participant and Waiting Room View** – By easily navigating between the Participant and Waiting Rooms, see participants in your meeting or those waiting for approval to join your meeting.

**Management and Control** – Maintain total meeting control with in-app features—mute, unmute, rename, disconnect all or individual participants, allow participants to share or be a co-moderator and much more.

**Meeting Security** – For all accounts within your organization, increase meeting security by setting a required application password that can be set to expire periodically and use your device-saved fingerprint to quickly access your meetings. For assistance, please contact your sales rep.

## Our favorite features:

- Connect to your meetings and save mobile minutes using VoIP instead of Call Me or DiaIn.
- Share and view content from your mobile device.
- Access your complete list of designated local and international dial-in numbers.
- Co-brand the app with your company logo or colors for maximum impact.
- Invite participants via SMS, email or Call Now within your meeting.
